Urban Forest Products (UFP)

UFP considers itself a “green company” because it uses recyclable materials in the manufacturing process. This includes recycled paper as well as methane gas generated from the local landfill to heat the dryers in the production process.

UFP’s product manufacturing starts at people’s curbsides in the recycling tote and ends in egg containers at the local grocery or in drink holders at fast food restaurants.

And when people are finished with them, UFP’s products can go back into the recycling tote where they originated!
